

The most wonderful thing about dogs is their

variety! The different **SHAPES**, **sizes**, and **colours** that we see is almost limitless. Every dog and every puppy is different and unique!

We also know that some breeds are more likely to have some inherited problems than other breeds. Just so you can be sure, each pup will be checked for potential inherited problems it could have.

You'll get peace of mind, and the best advice.

If we find an issue, together we can manage this before it can become a BIG problem.

## Questions?

**You will very likely find that your puppy will end up doing something that you are completely mystified by. That's OK! If you ever have questions about your puppy's development or behaviour or any general concerns, you are more than welcome to call, or email us to ask.**

**There is no such thing as a silly question, especially when asking about a loved pup!**

## What's next?

At their next vaccination, when they are a year old, you can keep them covered by our **Healthy Pets 4 Life** Adult packages!  
**Peace of mind for life!**

## Because we care!

**Good on you for being proactive in the care of your pup. We know that this is a great package to give you peace of mind and much pleasure with your precious pup.**

---

**At Busselton Vet Hospital, we believe that we have a duty to encourage and strengthen the human-animal bond between pets and their owners so they can enjoy a close, long and loving relationship to the benefit of all.**

Did you know that dogs age at a MUCH faster rate than we do?

By the time our puppies are 1 year old they have already gone through baby, toddler, child and puberty stages making them boisterous early teenagers! There are so many changes that happen in this first year of life that need to be checked so that our pups really can be

### ***“Healthy Pets 4 Life”***

Regular visits help cover all the bases and we take the stress of worry off of you.

- **Vaccinations** are amazingly effective at preventing your puppy from catching lethal infectious diseases. They will be done at the right time to protect your precious pup!
- Bones and joints grow fast in pups, especially large breeds. Stop small issues becoming BIG problems with a **Growing Puppy Joint check** at 4 months of age.
- Puppies have 28 baby teeth. They lose all these and get 42 new adult teeth between 3 and 6 months of age! No wonder they chew like crazy! Are the teeth coming out in the right spot, are the numbers right? Our pups need a **Growing Puppy Teething check** at 5 months of age to be sure!

- No one likes the thought of creepy crawly **fleas** which is why we use **Bravecto**, a tasty, chewy tablet to kill fleas for 3 months at a time!
- Even worse are those wriggly **worms**! **Milbemax** are great tablets, small and easy to use, to get rid of ALL those tummy worms.
- **Heartworm** is a tricky bug, you can't see it in their poo, it's hidden in their blood vessels! **Proheart injection** protects against these gross guys for up to a year at a time without the worry of forgetting their dose!
- **Desexing** helps virtually all pet dogs become easier to manage. No need to worry about the girls coming on-heat and making a mess or attracting unwanted attention! Boys will have less aggression towards other dogs and be easier to walk and handle. There are also many other benefits to having your pup desexed—just ask if you'd like to know more.
